

ADDING PLAYER MEDICAL INFO

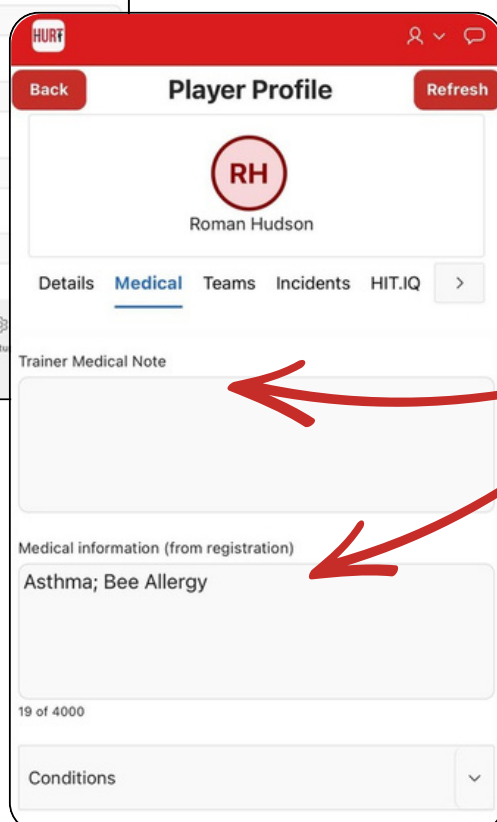

Updated 10 April 2026

Individual medical information can be added to a player's HURT profile in 3 different ways.

- 1 - At the time of the data load because it was provided by the parent when they registered their player within PlayHQ.
- 2 - Can be added manually by the Club Head Trainer.
- 3 - Can be added manually by the Team Trainer.

You can find or enter this information under the Medical tab

There are two areas in which medical information can be entered

When an incident is logged and a player's name is selected from the team list, the Team Trainer is presented with a pop up box outlining any medical information that has been provided before they can commence their injury recording.

Here is an example of medical information that has been entered in both by the parent at the time of registration and then also manually by the Club.
